ENERGY: HOW INDIA CAN BECOME A GLOBAL LEADER

"Energy security is paramount and we must shift to renewable energy in a phased manner.... [But] the world cannot shift overnight. We aim to achieve net-zero emissions by 2070"

"It is essential for renewable energy to become a people's movement.... This is not just a government initiative. It is a mission for future generations, and every citizen must be a part of it"

TAKEAWAYS

- **India is on track to meet its renewable energy targets, aiming for 500 GW capacity and a 50 per cent share of non-fossil fuels in total capacity by 2030**
- **Land acquisition remains a significant challenge for expanding solar and wind projects, but the government is working closely with states to resolve issues**
- **India is advancing its National Green Hydrogen Mission and aims to have infrastructure in place by 2030 to position itself as a global leader in the production of green hydrogen**

CHAT: THE FUTURE OF RENEWABLE FUELS FOR TRANSPORT

"Within two years, we will reduce Delhi's transport-related pollution by more than 50-60 per cent. We are working on several projects, including converting public transport to biofuels and electric"

"Today we import Rs 22 lakh crore worth of fossil fuels, which not only create economic challenges but also contribute to air pollution. Electric vehicles are the answer and we are already seeing a rise of 300 per cent in EV sales"

Nitin Gadkari, *Union Minister of Road Transport & Highways*
