

A BEACON FOR CLEANLINESS AND ENVIRONMENTAL STEWARDSHIP

The Yogi government is committed to making Mahakumbh 2025 a shining example of cleanliness and environmental responsibility while showcasing the intangible heritage of Sanatan culture. To achieve this, approximately 10,000 sanitation workers have been deployed to ensure the Mahakumbh area remains clean and well-maintained. Special efforts are being made to ensure their convenience and dignity, with the establishment of the 'Swachh Kumbh Fund' providing comprehensive support.

The 'Swachh Kumbh Fund' is being utilized to arrange free accommodation, meals, and education for the children of sanitation workers. This initiative not only secures the cleanliness of Mahakumbh but also provides education, healthcare, and economic stability for the workers and their families.

A dedicated sanitation colony has been constructed within the fair area, offering free food, drinking water, and lodging for sanitation workers, ensuring they work in comfort and security. Additionally, special attention is being given to the education of their children, with primary schools and Anganwadi centers being set up in every sector of the Mahakumbh area.

To support their livelihood, the honorarium of the sanitation workers is being transferred directly to their bank accounts via DBT every 15 days, ensuring prompt payment. This system helps meet their daily needs efficiently.

The 'Swachh Kumbh Fund' also seeks to empower sanitation workers socially and economically by connecting them with other central and state government schemes. This comprehensive approach reflects the Yogi government's vision of making Mahakumbh 2025 not just clean, but also inclusive and transformative for those who contribute to its success.

HIGH-TECH SANITATION SYSTEM

To bring the vision of a "Swachh Mahakumbh" to life, a strong emphasis is being placed on sanitation. Over 1.5 lakh toilets and urinals are being installed across the Mahakumbh grounds. A major challenge in ensuring cleanliness is the maintenance of these toilets, for which robust systems have been put in place. A QR-based monitoring system will conduct daily cleanliness surveys of the toilets. Any reports of unclean facilities will trigger immediate cleaning action, ensuring high hygiene standards.

Additionally, a jet spray cleaning system will be implemented to eliminate the need for manual cleaning. The responsibility of monitoring these facilities falls to 1800 Ganga Sevadoots, who will check each toilet twice a day—morning and evening. Using a dedicated ICT app, they will scan the QR code on each toilet and answer questions such as whether the toilet is clean, if the door is functional, and whether there is sufficient water.

Once feedback is submitted, the details of any unclean facilities will be sent to the relevant vendors for prompt action. Toilets that fall below cleanliness standards will be cleaned within minutes. In addition to the Ganga Sevadoots, members of the public will also be able to provide feedback via the same online system, ensuring a collaborative effort in maintaining cleanliness.

SINGLE USE PLASTIC-FREE MAHAKUMBH: A GREEN INITIATIVE

The Yogi government is dedicated to making Mahakumbh 2025 a clean and green event. With this vision, the government has set an ambitious target to make the entire Mahakumbh single use plastic-free. In line with Chief Minister Yogi Adityanath's commitment, efforts are underway to eliminate plastic from the fair area, creating a sustainable and eco-friendly environment during the event. As part of this initiative, single-use plastic will be completely banned. Instead, the use of natural products such as dona, pattal, kulhar, and jute and cloth bags will be
