

UNPRECEDENTED MEASURES FOR A SAFE, SECURE MAHAKUMBH

Mahakumbh 2025 will stand as a testament to the Yogi government's commitment to ensuring a seamless blend of security, convenience, and good governance. Prepared to handle any emergency, the administration has devised a comprehensive security plan for the anticipated 45 crore attendees of this grand cultural event. To safeguard the devotees visiting the Sangam, security personnel have been strategically deployed across 107 beats, ensuring a safe and well-organized experience for all. In addition to 10 companies of PAC, SDRF, and NDRF personnel, 700 boats will be manned by guards for water security. For effective crowd control at the ghats, thermo-plastic floating barricades are being set up, with police on duty 24/7.

To prevent any boat collisions during the bathing rituals, a "reflective river line" powered by solar energy will be introduced, guiding boats and ensuring safety. For the first time, "remote light boys" will be deployed on a large scale. These rapid-response personnel can reach any location in seconds and ensure the safety of devotees before any untoward incident can occur.

In addition to physical security, cutting-edge technologies and equipment, including state-of-the-art life jackets, floating jetties, and rescue tubes, will be used for safety. More than 1 lakh devotees are expected to stay in Kalpavas, along with thousands of sadhus, sanyasis, and fair officials, all of whom will be accommodated within the Mahakumbh area.

The Prayagraj Mela Authority has divided the Mahakumbh area into 25 sectors, covering over 4000 hectares, making it the largest Mahakumbh Mela ever held. To ensure effective administration and coordination, Sub-Divisional Magistrates have been appointed as Sector Magistrates for each of the 25 sectors, overseeing both administrative functions and departmental coordination throughout the event.

FIRE-FREE ZONE: ENSURING MAXIMUM SAFETY AT MAHAKUMBH 2025

The Uttar Pradesh Fire Department is committed to making Mahakumbh 2025 a fire-free zone by implementing cutting-edge technologies and robust safety measures. To prevent and control fire incidents efficiently, state-of-the-art equipment will be deployed across the Mahakumbh Mela area.

To enhance preparedness, the number of specialized fire personnel and fire-fighting vehicles has been significantly increased. AI-powered "Fire Detection Cameras" have been installed across key locations to provide real-time monitoring and rapid detection of any fire hazards. In case of a fire, the response time has been streamlined to just 2 minutes, ensuring immediate action can be taken to contain the situation.

Additionally, 200 "Specially Trained Rescue Groups" have been positioned throughout the Mela area to handle fire-related emergencies. Over 5,000 fire extinguishers are being placed in Akharas and critical areas to ensure rapid response. For the first time, AI-enabled fire detection cameras will be extensively used to track fire incidents. These cameras will immediately alert the fire stations through the control room, ensuring that firefighting teams can reach the affected area within minutes.

In another first, fire-fighting robots will be deployed to combat fires in hard-to-reach areas. These robots use advanced
