technology to put out fires in narrow lanes and spaces where fire trucks and personnel cannot easily access, enhancing the overall safety and effectiveness of fire control during the event.

In line with Chief Minister Yogi Adityanath's vision, the Uttar Pradesh Fire Department is committed to making Mahakumbh 2025 a "Zero Fire Incident" event. As part of this initiative, an innovative "All-Terrain Vehicle" has been introduced for the first time to enhance fire safety during the Mela.

This specialized vehicle is designed to rapidly reach any fire incident within seconds, ensuring swift intervention across the vast Mela area. Equipped with the latest fire safety devices, including a fire extinguisher, it is capable of navigating challenging terrains such as sand, swamps, and shallow water at full speed. Firefighters, specially trained for emergency responses, will operate the vehicle, continuously monitoring the event to ensure a prompt reaction to any fire-related emergencies.

This all-terrain vehicle marks a significant advancement in fire safety measures and will play a crucial role in maintaining a secure and fire-free environment throughout the Mahakumbh.

THREE-TIER SECURITY SYSTEM FOR DEVOTEES AT MAHAKUMBH

A robust three-tier security system has been established to ensure the safety and convenience of the devotees visiting Mahakumbh to take a dip at the Sangam. Under the guidance of Chief Minister Yogi Adityanath, special emphasis is being placed on ensuring that every devotee experiences a hassle-free visit, with no inconvenience faced at any point. To ensure this, each ghat will be thoroughly inspected before being opened to devotees. The water police have also made advanced arrangements for the safety of the pilgrims. The three-tier security circle includes:

First Security Circle: This team will be stationed outside the ghats for crowd management. In the event of large crowds, alternative routes will be designated to maintain smooth flow and prevent overcrowding.

Second Security Circle: Positioned on boats during the bathing process, this team will ensure that devotees are assisted as needed. In case of any difficulties, the security team will be able to reach the affected individuals quickly.

Third Security Circle: After the bath, this team will help devotees exit safely, guiding them to the designated areas.

Additionally, before the Mahakumbh begins, every boat going to the Sangam will undergo a thorough check. A "tester boat" has been designated to ensure the safety of all boats. Only once the tester boat gives the green signal, other boats will be allowed to enter the water.

To further ensure the safety and convenience of devotees, a special red strip will be placed on the boats to serve as an alert for tourists, making it easier for them to identify safe and designated boats for travel.

UNMATCHED SECURITY AND MANAGEMENT AT Mahakumbh 2025

The Integrated Command and Control Center (ICCC) for Mahakumbh 2025 will be a significant upgrade from the 2019 Kumbh, utilizing advanced technologies to manage the fair with greater efficiency.

The ICCC will leverage cutting-edge tools such as Artificial Intelligence (AI), chatbots, live surveillance, and a network of CCTV cameras to ensure smooth operations.

A robust network of over 1650 new CCTV cameras, 24 Automatic Number Plate Recognition (ANPR) cameras, 40 Vehicle Monitoring and Control Devices (VMCDs), 100 smart parking systems, and 268 AI-powered components will be installed to optimize crowd management and vehicle tracking.

The entire Mahakumbh area will be monitored from the ICCC, with additional viewing centers at Mela, MCR, Arail, and Jhunsi to ensure comprehensive coverage.

For the first time, AI-controlled CCTV cameras will monitor crowd management and safety at 9 major railway stations, further enhancing security.

The number of temporary fire stations has been increased from 43 in the 2019 Kumbh to 50 in Mahakumbh 2025, ensuring better fire safety and response.

This year, there will be 20 temporary fire posts (up from 15 in 2019), and over 150 fire reserve water tanks (compared to 75 in 2019) will be deployed.

Additionally, 50 fire watch towers will be established, up from 43 in 2019, with more than 7000 fire hydrants installed, a significant increase from 4200.

The number of fire fighters has been raised from 1551 in 2019 to 2071 in 2025, with the number of fire vehicles nearly doubling from 166 to 351, ensuring swift response times and comprehensive coverage during the Mahakumbh.

UNPRECEDENTED MEASURES FOR A SAFE, SECURE MAHAKUMBH
