

SOLAR GROUP: PIONEERING EXCELLENCE IN INDUSTRIAL EXPLOSIVES AND DEFENCE SOLUTIONS

Solar Group of Industries, comprising 'Solar Industries India Ltd.' and 'Economic Explosives Ltd.' is the largest manufacturer and exporter of Explosives & High Energy materials. Presently Solar Industries has manufacturing facilities across 4 continents, meeting the demands of over 82 countries. Solar is a totally indigenous company with a global footprint driven by National and International experts working relentlessly for the Defence Sector to realize the visionary National Policies of Hon'ble PM promoting Make in India as part of "Atmanirbhar Bharat"

Satyanarayan Nuwal, Chairman, Solar Group

Solar Group's journey from a small enterprise to a global leader exemplifies vision, innovation, and resilience. By fostering indigenous Defence manufacturing and sustainable practices, Solar Group is a true partner in realizing Atma Nirbhar Bharat. With its cutting-edge products and forward-looking leadership, Solar Group continues to strengthen India's industrial and defence capabilities, ensuring a brighter and more secure future for the nation.

Counter Drone System

Recent achievements are enumerated in succeeding paragraphs:

High Explosive HMX : Solar has set up world's largest state of the art production plant to manufacture HMX and HMX based compositions. Up till then, the country had been totally dependent on imports. Now Solar, after meeting Indian demand, regularly exports HMX and its compositions world over to countries like USA, France, Israel etc.

Multi-Mode Hand Grenade (MMHG) : EEL holds the distinction of being the first private company in India to produce fully formed ammunition. EEL has produced and replaced World War 2 vintage (1915) M36 grenade with MMHG and supplied 10 Lakhs MMHG with a reliability of 99.86% whereas reliability of M-36 was about 65-70%.

Loitering Munition - Nagastra : EEL is the first Indian Company to designed, developed & manufactured variants of fully weaponized Loiter Munition and suppled to Indian Army. Our weaponized Loiter Munition has not only scored above the imported contemporaries in technical features and specifications but is also almost 40% cheaper.

Bhargavastra : Fully indigenous Counter Drone System (Hard-Kill) using Rockets and Micro-missiles is in the advanced stage of development under Make II project of Indian Army. The development is expected to be completed within a year, ahead of the Indian Army's schedules. However, EEL is prepared to demonstrate the first prototype of this Vehicle Mounted Counter Swarm Drone System. It would be our privilege to demonstrate the capabilities of "Bhargavastra" during your proposed visit. To the best of our knowledge, no other system exists in the world matching the features and capabilities of "Bhargavastra".

Bhaumastra : As per Ottawa convention, there are approx. 110 million buried mines world over which remain uncleared and causing casualties 15,000-20,000 victims annually. In consideration of this vital global problem EEL has developed a unique Drone based mine detection and disposal system which would be the first of its kind to resolve this global problem. This system is also planned to be demonstrated during your proposed visit.

SEBEX-2 developed by EEL, is an HMX-based castable composition that has more than 2 times the power of TNT equivalence. SEBEX 2 will be a game changer for improving the lethality of warheads, aerial bombs & munitions.

SITBEX-1 : EEL has developed the Thermobaric Polymer-bonded Explosive SITBEX-1. This product will be an ideal choice for filling in air bombs, missiles, warheads and other munition systems intended for the destruction of tunnels, bunkers or other fortified structures. In the current day warfare this should give our forces huge tactical superiority.

SIMEX-4 : EEL, Nagpur, has also developed a new insensitive explosive (IM) formulation. SIMEX-4 has almost 2.5 times higher shock insensitivity and 2 times larger critical diameter, in comparison to the present insensitive explosive. Hence, SIMEX-4 is highly promising for developing IM systems for armed forces. DGNAI has issued a compliance certificate under the "Defence Export Promotion Scheme" by the MoD.

(MALE) Class of UAV : EEL has ventured into the development of Medium Altitude Long Endurance UAV as there is no indigenous system available in the country. EEL has submitted Suo Moto proposal under Make-II (IDDM) to Indian Air Force, Army and Navy. An indigenous MALE class of UAV will meet the country's requirement of surveillance as well as weapon platform.
