

GUJARAT

LEADING THE WAY IN DEMOCRATISATION OF ENERGY TRANSITION

In 2003, Gujarat took a historic leap towards energy transition under the visionary leadership of the then Chief Minister Shri Narendra Modi. Through transformative reforms such as the unbundling of the Gujarat Electricity Board (GEB), universal electrification, and groundbreaking renewable energy initiatives, the state laid the foundation for inclusive and sustainable energy practices. These reforms democratized access to energy, fostering a model of growth that has since positioned Gujarat as a trailblazer in India's energy landscape, setting unparalleled benchmarks for innovation and excellence.

A LEGACY OF INNOVATION AND SUSTAINABILITY

Building on this strong foundation, Gujarat continues to lead the energy transition with an unwavering commitment to renewable energy and sustainability. The state's political leadership, under the guidance of the Hon'ble Chief Minister and Energy Minister, is firmly committed to promoting the Panchamrit goals, which emphasize clean energy, decarbonization, and environmental preservation. Gujarat not only aims to contribute significantly to India's target of achieving net-zero emissions by 2070 but is also determined to achieve its own net-zero status well ahead of this timeline.

Driving this transformation is the Centre for Net Zero Energy Transition (C-NET), an initiative by Gujarat Urja Vikas Nigam Limited (GUVNL) under its premier training and research institute, GETRI. C-NET stands as a pioneering think tank—the first of its kind established by a power utility company—to craft a comprehensive roadmap for net-zero emissions. It embodies the principles of just transition outlined in the G20 Delhi Declaration, championing sustainability, equity, and community engagement as cornerstones of Gujarat's energy transition journey.

C-NET'S ROLE IN SHAPING GUJARAT'S ENERGY FUTURE

At the heart of Gujarat's democratisation of energy transition is the Centre for Net Zero Energy Transition (C-NET), serving as the nerve centre for research, innovation, and strategic implementation. C-NET crafts long-term strategies to advance electrification and achieve net-zero emissions while ensuring energy security and supporting economic growth. The actionable insights from its studies empower GUVNL and its group
