The distillery will generate employment opportunities in the region and provide farmers with new avenues to enhance their livelihoods. It will also focus on skill development, fostering a culture of entrepreneurship within local communities. Pernod Ricard India is committed to implementing sustainable practices throughout the facility's operation. The distillery will utilize 100% renewable electricity, leverage biomass from agricultural waste, and adopt water-positive measures to minimize its ecological footprint. This commitment supports the company's vision of establishing India as a hub for premium malt-based heritage brands, catering to both Indian consumers and global markets.

Leading in Digital Transformation & AI

Pernod Ricard India has positioned itself at the forefront of digital innovation, transforming its business model through cutting-edge technological integration. PRI's 'conviviality-driven approach to AI' is all about enhancing the consumer experience by making every interaction more authentic, joyful, and meaningful.

The company's journey into data and AI started four years ago with its Key Digital Programs, such as Maestria, which enhances portfolio strategies by understanding consumption moments; Matrix, which optimizes marketing investments for greater impact; and D-Star, which boosts sales by identifying high-potential outlets. It continues today by integrating generative AI across more functions and employees. By embracing a digital-first approach, PRI has achieved remarkable operational improvements, including a 25% enhancement in forecast accuracy and a 90% adherence to production plans.

The company's innovation strategy is deeply consumer-centric, adapting continuously to evolving market preferences through data-driven insights and agile methodologies. Its commitment to innovation spans multiple dimensions, from developing homegrown premium spirits to introducing global premium innovations tailored specifically to the Indian market. PRI's AI strategy has been recognized as best-in-class and featured in a Harvard case study.

Responsible and Growing for Good

Pernod Ricard India's sustainability and responsibility (S&R) initiatives are guided by the

"Good Times from a Good Place" philosophy. Focused on inspiring authentic moments of sharing, the company adopts a holistic approach that addresses environmental, social, and economic dimensions with unprecedented depth and commitment. Sustainability is central to PRI's ethos, with the 3Ps: People, Planet, and Profit, forming the backbone of its business. Guided by its 2030 S&R roadmap, the company focuses on four core pillars: Nurturing Terroir, Valuing People, Circular Making, and Responsible Hosting. Aligned with the United Nations Sustainable Development Goals (SDGs), PRI takes pride in implementing sustainable practices throughout its production process, from grain to glass, on a global scale.

Pernod Ricard India has set ambitious targets, including reducing absolute Scope 1 & 2 emissions by 54% by 2030 and eliminating deforestation across primary commodities by 2025. Under its flagship program WAL (Water, Agriculture, Livelihood), the brand has constructed 2,355 water storage and recharge structures since 2019, creating a water potential of 4,484 million liters, thereby safeguarding year-round access to water for communities. The WAL initiative recently won the Indian CSR Award 2024 in the category of "Best Water Preservation Initiative of the Year".

The transition to renewable energy tells an equally compelling story. Moving from zero biomass usage in FY22 to 98% in its current operations, PRI has drastically reduced its carbon footprint. As a committed RE100 member, it has achieved 100% renewable energy usage through rooftop solar installations and International Renewable Energy Certificates (IRECs). Its industry-first #OneForOurPlanet initiative eliminates the use of permanent mono-cartons, aiming to reduce packaging emissions by 75,000 tonnes by 2030 while inspiring eco-conscious consumer choices.

Beyond business metrics, the company's social impact narrative is truly inspiring. Its initiatives have impacted over 1,600 villages across 22 states, with a particular focus on women's empowerment and community development. In agriculture, the company supports 10,000 farmers yearly with climate-resilient sustainable practices, fostering entrepreneurial leadership among women farmers through its 56 Women Producer Groups. PRI's focus on collective success is further evident through its 8 Farmer Producer Organizations (FPOs) across 5 states (Rajasthan, Maharashtra, Madhya Pradesh, Punjab, and Uttar Pradesh), enhancing the livelihoods of marginal and small farmers.

Raising a Toast to Shared Growth

As Créateurs de Convivialité, Pernod Ricard's mission in India is to continue driving premiumization and investing in local capabilities. The company espouses a comprehensive approach to sustainable growth that balances economic objectives with social responsibility and environmental stewardship. By focusing on innovation, digital transformation, and inclusive growth, the company is not just planning for business success but contributing to India's broader economic and social development.

With three decades of conviviality, innovation, and commitment, Pernod Ricard India isn't merely celebrating a milestone; it's raising a toast to India's remarkable journey and the sheer magnitude of exciting possibilities still awaiting to be written. Looking forward, the company aims to revolutionize whisky in India by leveraging global premium innovations while maintaining a laser focus on local consumer preferences. By harmonizing technological innovation, consumer insights, and a collaborative culture, Pernod Ricard India has emerged as a dynamic, forward-thinking organization in the competitive alco-bev landscape.
