

REVOLUTIONIZING RENEWABLE ENERGY

MNRE'S LEADERSHIP AND IREDA'S CATALYTIC IMPACT

Under the visionary leadership of Hon'ble Prime Minister Sh. Narendra Modi and spearheaded by Hon'ble Union Minister of New and Renewable Energy, Sh. Pralhad Joshi, India has emerged as a global frontrunner in the renewable energy sector. With ambitious targets and groundbreaking achievements, the Ministry of New and Renewable Energy (MNRE) has transformed the nation's energy landscape, setting benchmarks for the world to follow.

In 2014, India's renewable energy sector was at a very nascent stage, contributing only a fraction to the nation's energy mix. Solar energy capacity was barely 2.82 GW, and wind energy stood at 21 GW. The total installed renewable energy capacity was just 75.52 GW, reflecting limited ambition and investment in the sector. However, since 2014, the renewable energy sector has witnessed unprecedented growth driven by a common vision of self reliant and sustainable India. Bold policy initiatives, strategic investments, and international collaborations turned the country into a global leader in clean energy. By November 2024, India's installed renewable energy capacity had surged by an impressive 180%, reaching 213.7 GW. Solar energy emerged as the crown jewel of this transformation, with capacity skyrocketing 33-fold to 94.17 GW. Wind energy also more than doubled its capacity to 48 GW and the impact of this rapid expansion was evident in the country's energy output. Renewable energy generation more than doubled, climbing from 193.50 billion units in 2013-14 to an astounding 359.89 billion units in 2023-24. India's manufacturing capacity in renewable energy was almost non-existent in 2014,. Today, the nation has achieved exponential growth, with solar module production reaching 60 GW and targets set for 100 GW by 2030. This growth has been supported by a significant increase in budgetary allocations, with a highest ever allocation of Rs 19,100 crore for the renewable energy sector in the recent Union Budget. India's domestic production of solar cells and wafers grew from near-zero in 2014 to 12 GW and 2 GW, respectively, with targets of 70 GW for cells and 40 GW for wafers by 2030, reducing our dependence on imports and becoming a self-sustaining powerhouse.

Transformative Policies and Global Leadership

Under PM Modi's visionary leadership, key policy shifts are being implemented, including transitioning hard-to-abate industries from energy efficiency targets to emission targets. This shift, coupled with the development of the Indian Carbon Market (ICM), is designed to create robust market incentives for industries to adopt cleaner technologies. Green Hydrogen is another important area which is at the heart of India's efforts to advance Green Energy solutions. PM Modi's ambitious National Green Hydrogen Mission, with an approved outlay of ₹19,744 crores, aims to position India as a global leader in green hydrogen production.

US Ambassador to India Eric Garcetti recently praised India's ambitious renewable energy targets, describing them as "bold goals" that position the country to become the global "shop floor" for the sector over the next 30 years. He highlighted India's remarkable commitment, noting that "India is investing more in renewable energy than nearly any other nation on the planet."

To encourage creation of domestic demand, we have invited the world's largest Green Ammonia procurement tender of 7,39,000 Tonnes per annum quantity. Moreover, the PM-Surya Ghar Muft Bijli Yojana provides rooftop solar installations and free electricity up to 300 units monthly for one crore households, with over 1.5 crore registrations and 6.5 lakh installations completed so far. The PM-KUSUM offers subsidies of up to 30%-50% for installing standalone solar pumps and solarizing existing grid-connected agricultural pumps.

Shri Pralhad Joshi
Hon'ble Cabinet Minister of New and Renewable Energy and Consumer Affairs, Food and Public Distribution

> India's embrace of innovative technologies, investment in robust infrastructure, and cultivation of international cooperation have elevated us from a mere participant to a leading force in this transition to New & Renewable Energy.

The recently concluded REINVEST conference in Gandhinagar marked a milestone in India's renewable energy journey, driven by Hon'ble Prime Minister Sh. Narendra Modi's efforts to attract global investment. It secured record commitments worth ₹32.45 lakh crore, and commitments for 540 GW of solar and wind capacity from States
