

A Holistic Approach to Growth

IREDA revamped its recruitment policies to hire talent from premier institutions like IITs and IIMs apart from upskilling employees in emerging areas like green hydrogen, battery storage, and innovative financing, ensuring they are prepared to evaluate and support next-generation projects.

Training programs on emerging RE technologies equipped employees to evaluate projects in areas like green hydrogen and pumped storage hydro, enhancing organizational capabilities. This coupled with a centralized ERP system, Microsoft D-365 across key functions, enabled seamless operations and data insights. This effort doubled employee productivity, evidenced by a 2x increase in assets under management (AUM) per employee since FY21.

Vision 2030: IREDA's Roadmap to Transform India's Renewable Energy Landscape

IREDA has outlined a bold and transformative vision for 2030, aligning itself with India's ambitious targets of achieving 500 GW non-fossil fuel installed capacity by 2030. This includes a mix of renewable sources like solar, wind, hydro, biomass, and newer technologies such as pumped storage hydro and green hydrogen production. Achieving this target will require an estimated investment of ₹30-32 lakh crore over the next decade. As a Navratna CPSE and India's largest dedicated green financing NBFC, IREDA aims to shoulder a significant portion of this financial responsibility.

To support this monumental task, IREDA plans to grow its loan book to a staggering ₹349,700 crore by FY30, a significant leap from its current portfolio of ₹64,564 crore as of FY25 H1. This growth represents not only a quantitative increase but also a qualitative shift in the types of projects it supports, moving deeper into emerging technologies like green hydrogen and EV infrastructure. Additionally, disbursements are projected to reach ₹136,700 crore by FY30, underscoring the agency's ability to scale operations and meet the burgeoning demand for RE project financing.

A cornerstone of IREDA's Vision 2030 is achieving Maharatna status, which represents the highest level of autonomy and recognition for a Central Public Sector Enterprise (CPSE). Attaining this status will allow IREDA to make larger financial investments independently, enhancing its ability to support mega-projects in RE; boost its global credibility, attracting more international investors; and strengthen its position as a national leader in green finance, inspiring other institutions to follow suit.

To realize its vision, IREDA has aimed at expanding its portfolio to include emerging technologies like Pumped Storage Hydropower, green hydrogen production, advanced energy storage solutions, and smart grids. It also intends to support export-oriented sectors through innovative financing tools like foreign currency loans from its GIFT City office, reducing borrowing costs for clients. Furthermore, IREDA has targeted strengthening India's Domestic Supply Chains by promoting localized manufacturing of RE components, such as solar panels, electrolyzers, wind turbines & EV batteries; and encouraging partnerships between Indian firms and global players for technology transfer and capacity building.

For enhanced risk management, IREDA has a roadmap to leverage advanced analytics and a proprietary credit risk appraisal system to evaluate complex projects with precision; and implement cutting-edge digital tools to streamline loan processing and monitoring. In terms of sustainability and ESG Integration, IREDA will ensure that financed projects meet stringent Environmental, Social, and Governance (ESG) criteria.

By 2030, India aims to not only meet its RE capacity targets but also position itself as a global leader in clean energy innovation. To ensure this IREDA plans to mobilize investments at an unprecedented scale to fund infrastructure that supports green growth apart from facilitating policy implementation, working closely with the government to streamline regulations and attract private-sector participation.

Lessons in Turnaround Leadership

IREDA's turnaround is a masterclass in strategic management, highlighting the importance of targeted financial interventions such as upgradation of domestic credit rating to AAA (Stable) by multiple leading credit rating agencies & international credit rating of BBB (Stable) by S&P Global as well as successful equity infusion via IPO; sectoral focus and innovation to cater to emerging market trends; and governance and accountability through transparent reporting and rigorous compliance. These elements combined to transform IREDA into a resilient, high-performing, and future-ready organization.

As India progresses toward Vision 2047, the Ministry of New and Renewable Energy is unwavering in its commitment to expanding renewable energy infrastructure and achieving energy self-reliance. India's renewable energy transformation, guided by the visionary leadership of Hon'ble PM Sh. Narendra Modi and the dedicated efforts of Hon'ble Union Minister Sh. Pralhad Joshi, underscores the nation's determination to build a sustainable and self-reliant future. Positioned as a critical driver in India's clean energy revolution, IREDA is at the forefront of fostering investments, driving innovation, and setting benchmarks in corporate leadership. With its solid foundation and ambitious outlook, IREDA stands as a vital pillar of India's journey towards a sustainable and energy-secure future.
