

BREAKING CRITICAL MINERAL MONOPOLY: LOHUM

India's Decisive Global Advantage

In the shadow of China's towering dominance over critical minerals, an Indian champion has quietly emerged, ready to reshape the global landscape. Lohum, a company that few Indians had heard of until recently, is now making international headlines by achieving what many thought impossible – breaking into a market that China has held in an iron grip for decades.

The stakes couldn't be higher. With 80% of the world's critical materials refining and recycling concentrated in China, the global race for mineral security has become the new Great Game. But in the industrial corridors of Greater Noida, Lohum has been orchestrating a remarkable revolution in sustainable critical minerals production.

The numbers tell a story of explosive growth. In just six years, this Indian powerhouse has scaled to USD 100 Million in annual revenue, maintaining profitability for over three consecutive years. All geared up from raising USD ~85 Million over the years across multiple successful rounds of investment and plans to deploy another USD 200 Million, Lohum isn't just growing – it's racing ahead at breakneck speed.

But here's what makes global giants sit up and take notice: Lohum has captured 90% of India's end-to-end battery recycling market. With a massive 5GWh annual recycling capacity, the company has become India's largest producer of Lithium and Cobalt, and the second-largest producer of Nickel. More importantly, it's achieving this while matching Chinese recyclers on cost efficiency – a feat that has caught the attention of international markets.

The timing couldn't be better. NITI Aayog projects that by 2030, India will need to recycle 128 GWh of batteries – that's 600,000 KT of batteries requiring processing. Globally, the US and Europe alone will face a tsunami of nearly 1 million MT of batteries needing recycling. This is where India's cost advantage, powered by Lohum's technological prowess, creates a perfect storm of opportunity.

The world is already betting on this Indian success story. The company has inked strategic joint ventures with the UAE's Ministry of Energy and Infrastructure alongside the Beeah Group, and with ReElement in the United States. These aren't just partnerships; they're votes of confidence in India's technological capabilities.

At the heart of Lohum's success lies its zero-waste, energy-efficient processes – proprietary technologies that have emerged from its intensive research and development efforts. While the world worries about concentrated mineral reserves in DR Congo, Chile, and Australia, Lohum is building a sustainable alternative that could help India become the world's recycling hub.

With a client roster boasting over 200 global customers, including premier recyclers from the United States and European Union, Lohum has become more than just a company – it's become India's answer to the critical minerals challenge. As countries worldwide scramble to secure their mineral supply chains, this Indian company is showing that sustainability and profitability can go hand in hand.

In the global race for mineral security, India has found its champion. And as the world watches, Lohum is proving that the future of critical minerals doesn't have to be made in China – it can be made in India, sustainably and competitively.

Rajat Verma

Founder and CEO

Rajat Verma is the founder and CEO of LOHUM, India's largest producer and processor of sustainable critical materials. An alumnus of IIT Kanpur, Stanford University, and Harvard Business School, Verma founded LOHUM in 2018 with the vision of making battery materials infinitely sustainable. Under his leadership, LOHUM has grown to command 90% of India's end-to-end battery recycling market, achieving $100 million in annualized revenue within six years while maintaining profitability for the past three years. Through strategic global partnerships, including a joint venture with American Metals LLC and ReElement in the US and one with UAE's Ministry of Energy and Infrastructure, Verma has positioned LOHUM as one of the largest integrated battery recycling and refining companies outside of China.
