# DR. HARINDER SINGH BEDI

## REVOLUTIONIZING CARDIOVASCULAR CARE THROUGH INNOVATION AND EXCELLENCE

Dr. Harinder Singh Bedi, MCh, FIACS (Gold Medalist), is a visionary Cardiovascular, Endovascular, and Thoracic surgeon whose groundbreaking work has earned him international acclaim. He is the Director of Cardiovascular, Endovascular, and Thoracic Sciences at Park Grecian Hospital in Mohali, Dr. Bedi is a pioneer in innovative surgical techniques that have transformed patient outcomes globally.

Dr. Bedi's contributions to beating-heart surgery are monumental. He performed the world's first series of multi-vessel total arterial beating-heart surgery with post op angios , a feat documented in the Limca Book of Records and global medical journals including the Annals of Thoracic Surgery in Jan 2000. This technique minimized complications by eliminating the need for a heart-lung machine, paving the way for safer surgeries worldwide with faster recoveries. “Every challenge in the operating room is an opportunity to redefine what's possible,” reflects Dr. Bedi.

Among Dr. Bedi's most celebrated achievements in recent times is the invention of the “Bedi Cooling Turban,” a device that protects the brain during complex surgeries like combined carotid endarterectomy (CEA) and coronary artery bypass grafting (CABG). This groundbreaking device uses chilled water to cool the brain, significantly reducing the risk of neurological damage. The Cooling Turban has been endorsed by national and international experts and is published across leading medical journals worldwide. “Innovation in medicine is not just about saving lives; it is about improving the quality of those lives,” says Dr. Bedi about his invention.

Dr. Bedi also introduced an innovative method to address bronchopleural fistula (BPF), a devastating complication of lung resection. By buttressing the closure of the stump with a pedicled internal mammary artery (IMA) flap, he has provided a safer and more effective solution to this critical problem. This technique is widely regarded as a benchmark and has been featured in major international medical publications. This method was recently presented to the Editors of CTS Net (Cardiothoracic Surgery Network) – all accomplished senior American and European Cardio Thoracic Surgeons - who initially expressed surprise that this method had not been thought of by any other surgeon. They examined the report very critically and then endorsed it whole heartedly as a major advance in improving patient care .They named it as - Bedi IMA Buttress – to honour the innovator.

### A LEGACY OF EXCELLENCE

Over three decades, Dr. Bedi has performed over twenty thousand open-heart surgeries with outcomes matching international standards. He introduced several first-time procedures in Punjab, including minimally invasive bypass surgeries, pediatric heart surgeries, and vascular and endovascular surgeries . His work in hybrid cath labs has further established him as a leader in advanced cardiac care.

A passionate advocate for preventive healthcare, Dr. Bedi emphasizes the importance of holistic well-being. “Stress is the silent killer, but through lifestyle changes, we can outsmart it,” he advises. Dr. Bedi's approach extends beyond treating illnesses; he seeks to educate society about heart disease prevention and the value of balanced living.

Dr Bedi was earlier at the St Vincent's Hospital in Sydney and the original Escorts Heart Delhi. He started the first heart surgery programme in the Fortis group of Hospitals and was Head of Cardio Vascular Surgery at the CMC Ludhiana.

His father – late Maj KMS Bedi - was a War Hero and his mother – Mrs Bhupinder Kaur Bedi - is an educationist.

Dr Bedi hails from Dera Baba Nanak (paternal) and Dayalpura Sodhian (maternal) of Punjab.

His wife, Dr. Nandini Kaul Bedi, is a renowned pediatric surgeon, and their son, Dr Yudhishtar, is a postdoc PhD scientist working in Stanford University, USA.

With his innovations and philosophies resonating across the medical community, Dr. Harinder Singh Bedi continues to inspire with his commitment to advancing global Cardi- Vascular and Thoracic care.
