

TRANSFORMING CARDIAC CARE:
The Remarkable Journey of Dr Harinder K. Bali

Dr Harinder K. Bali is an eminent figure in Indian cardiology, renowned for his excellence, compassion, and innovative approach to medical practice. With over four decades of distinguished service, he currently serves as the Chairman of Cardiac Sciences and Dean Acedemic & Research at Livasa Hospital in Mohali. Throughout his illustrious career, Dr Bali has become synonymous with groundbreaking achievements in cardiology, having made significant contributions to the field through his unparalleled expertise and dedication to patient care.

From the very beginning, Dr Bali's journey was marked by brilliance. A

Visionary in Cardiology

Dr Bali's contributions to cardiology are monumental. He has performed hundreds and thousands of coronary interventions and introduced primary angioplasty to manage heart attacks in Northern India. His expertise spans diverse procedures, including advanced treatments for coronary artery disease, biventricular pacemakers, TAVI (Transcatheter Aortic Valve Implantation), and the endovascular management of arterial aneurysms. His groundbreaking work in treating Takayasu's Arteritis earned him global recognition as he was the first in the world to demonstrate the efficacy of stenting for this rare condition.

A prolific researcher, Dr Bali has over 125 publications in leading journals, including The New England Journal of Medicine (NEJM) and The Journal
