stellar student and a natural leader, he completed his MBBS at Jammu University in 1981, followed by an MD in Medicine and DM in Cardiology from the prestigious Post Graduate Institute of Medical Education and Research (PGIMER), Chandigarh. His exceptional performance earned him the Kataria Memorial Gold Medal, PGIMER's highest academic honour, awarded to the best postgraduate across all disciplines.

Dr Bali's tenure as faculty at PGIMER was marked by transformative contributions to medical science and education. He trained a generation of cardiologists while conducting pioneering research in clinical and interventional cardiology.

What truly sets Dr Bali apart is his warmth and empathy. Known for his gentle demeanour and wise counsel, he listens to every patient with care, often calming their fears with his reassuring presence. Colleagues and patients alike speak of his ability to balance clinical precision with a profoundly human touch.

of the American College of Cardiology (JACC). He has presented at renowned conferences such as EuroPCR and TCT, earning a reputation as a global thought leader in interventional cardiology.

A Focus on Emerging Challenges

Looking ahead, Dr Bali is deeply invested in addressing some of the most pressing issues in cardiology. Among his priorities is tackling the growing prevalence of heart failure in younger populations, elderly individuals, and post-menopausal women.

"Younger people are experiencing heart issues at alarming rates due to stress, overuse of gadgets, sedentary lifestyles, and environmental factors," he explains. "It is imperative to raise awareness and implement preventive measures." For elderly patients, Dr. Bali emphasizes the need for personalized care, as they often present with multiple comorbidities that require a nuanced approach.

He is particularly concerned about post-menopausal women, an under-recognized group at risk of heart disease. "After menopause, the protective effect of estrogen diminishes, making women more vulnerable to cardiovascular conditions," he notes. "Unfortunately, their symptoms are often atypical and overlooked, leading to delayed diagnosis and poorer outcomes. This needs urgent attention through better awareness, early screening, and targeted therapies."

To address these challenges, Dr Bali plans to combine advanced medical techniques with community-driven initiatives. Through education, research, and patient-centric programs, he aims to bridge gaps in care and ensure equitable access to life-saving interventions.

The Gentle Healer

Beyond his clinical and academic pursuits, Dr Bali is a passionate advocate for public health awareness. Under his leadership, the HEART Foundation has organized walkathons, health seminars, and educational campaigns to combat the growing burden of cardiovascular diseases. His initiatives have not only informed the public about preventive care but also provided critical resources to underprivileged communities, from vaccination drives to Clean India campaigns.

Dr Bali's approach to healthcare is deeply rooted in his belief that societal well-being extends beyond medical interventions. He often emphasizes the importance of lifestyle changes, mental health, and environmental factors such as air quality in preventing cardiac conditions. His personal commitment to health—spending 45 minutes daily on light aerobic exercises—is a reflection of his philosophy.

Outside the hospital, Dr Bali is a man of diverse interests. An avid reader with an impressive personal library, he enjoys Urdu poetry, music, and writing on social issues. His love for sports, cultivated during his college years, remains an integral part of his life.

Dr Bali's wife, Neeru, a doctor and an educationist, shares his vision of giving back to society, while his daughter is pursuing a Ph.D. in computer science in the United States. His elder brother is a renowned Nephrologist in Jammu. Despite his towering achievements, Dr Bali remains grounded, constantly finding ways to contribute to the community. Through his HEART Foundation, he organizes workshops, awareness drives, and vaccination programs for underprivileged children.

As he continues to address emerging challenges, focusing on heart health across all demographics, Dr Bali's legacy shines brighter than ever. His journey inspires not only those in the medical field but everyone striving to make a difference in the lives of others.
