

this art form and the economic sustenance of their communities.

The GI registration of Thulma blankets has had a transformative impact on the product and its stakeholders in terms of safeguarding the traditional knowledge and techniques of Thulma weaving, ensuring that this age-old craft continues to thrive in the modern era. It has also boosted demand for Thulma blankets, creating a sustainable source of income for the Bhutiya community, particularly for women who play a pivotal role in the production process.

Varanasi Wooden Lacquerware & Toys:

Wooden Lacquerware and Toys, an ancient craft from Varanasi, Uttar Pradesh, is renowned for its intricate carving and painting. These toys, crafted without joints from a single piece of wood, span categories like religious, cultural, traditional, and modern toys and decorative items. The region's wooden lacquerware and toy-making belt, centered in Varanasi district and extending to Mirzapur, Sonbhadra, and Chandauli, is among India's largest hubs for this craft. These vibrant, harmless playthings hold aesthetic and cultural value. The Geographical Indication (GI) tag has revolutionized the craft's impact. Artisans' average monthly incomes rose by ₹6,325 post-GI, while the registered proprietor's turnover witnessed a remarkable 103% annual growth. This recognition has elevated the craft's prestige and market appeal, fostering greater investments and appreciation for its sophistication. Its economic and cultural significance is now amplified, cementing its place as a symbol of India's rich craftsmanship.

Thewa Art Work:

Thewa Art Work, a centuries-old craft practiced in Pratapgarh, Rajasthan, stands as a testament to India's rich artistic heritage. This exquisite art form, born from the creative brilliance of jewelers, embodies the essence of fine art infused with royal patronage. The historical states of Rajasthan and Gujarat, known for their regal traditions, have significantly influenced the evolution of Thewa Art, enriching it with cultural depth and sophistication. Thewa Art flourished under royal patronage, reflecting the grandeur of royalty, socio-economic conditions, and architectural brilliance. This unique art form transforms utility items into works of wearable art.

Jewelry pieces such as necklaces, lockets, pendants, earrings, bracelets, and forehead tikas, as well as utility items like combs, hairbands, coat buttons, photo frames, and jewelry boxes, are adorned with intricate Thewa designs, showcasing its versatility and elegance. The GI (Geographical Indication) registration of Thewa Art has played a pivotal role in preserving and promoting this exceptional craft. It safeguards the authenticity of the art form, ensures recognition for its practitioners, and opens new avenues for its global appreciation. This recognition not only celebrates the heritage of Thewa Art but also empowers its artisans, ensuring the continuity of this royal legacy in modern times.

Gir Kesar Mangoes:

Gir Kesar Mangoes from Gujarat's Junagadh and Amreli districts received a GI tag, applied for by Junagadh Agriculture University and Gujarat

Agro-Industries. This recognition safeguarded the mangoes' unique identity, preventing ordinary Kesar mangoes from being misrepresented as "Gir Kesar Mangoes." It enabled farmers in these districts to differentiate their produce, ensuring they receive a premium price for their authentic, high-quality mangoes. The GI tag has been instrumental in boosting farmers' incomes and preserving the reputation of this regionally distinct variety.

Mizo Chilli:

Popularly known as Bird's Eye Chilli, Mizo Chilli is a prized crop of Mizoram, celebrated for its unique qualities and organic cultivation. Its distinctive small size adds aesthetic value to dishes, while its vivid blood-red color, attributed to the high potash content in Jhum lands, sets it apart from other varieties. Known for its exceptional pungency, Mizo Chilli delivers a clear, fiery heat. Grown organically, the crop benefits from Mizoram's fertile loamy to clay soils rich in organic carbon. The naturally acidic soil (pH 4.5–5.6) and the traditional practice of burning Jhum land further enhance its growth and vibrant coloration.

Mizo Chilli cultivation is also environmentally sustainable. The use of chemical fertilizers and pesticides is minimal, supported by natural pest control methods. For instance, intercropping with paddy significantly reduces the incidence of Leaf Curl Disease, as whiteflies, the virus vector, are hindered by the paddy's physical barrier. This natural disease resistance eliminates the need for pesticides, preserving the chilli's organic integrity. The Geographical Indication (GI) tag amplifies its market value, emphasizing its authenticity, quality, and unique regional identity.

Araku Coffee:

Araku Coffee, grown in the picturesque Araku Valley of Andhra Pradesh and Odisha, has become a symbol of tribal empowerment and global recognition, thanks to its Geographical Indication (GI) tag. This unique coffee, cultivated by tribal farmers using organic methods, was recently highlighted by Prime Minister Narendra Modi during his Mann Ki Baat broadcast. He praised Araku Coffee not just for its exceptional flavor but also for its role in transforming the livelihoods of tribal communities. The GI certification has played a pivotal role in protecting the distinct identity of Araku Coffee and enhancing its market value. This recognition has enabled the product to command a premium price in international markets, elevating it from local cultivation to a global brand.
