

MARUTI SUZUKI CONCEPT EVX

The Concept eVX is a mid-size electric SUV concept designed and developed by Suzuki Motor Corporation, Japan, offering SUV design elements with an upright posture and high seating. The Concept Electric SUV will be powered by a 60kWh battery pack, offering up to 550km of driving range. The SUV measures at around 4.3 metres and is expected to be launched in India by 2025.

TATA HARRIER EV

Tata Motors is all set to launch the electric version of its monocoque SUV, the Harrier. The Harrier EV comes with a mildly redesigned front end and now gets a sleeker light panel and DRLs. The alloy wheels are new and are more aerodynamic. While Tata Motors remain tight-lipped on the specifications of the Harrier EV, we hear that it might feature a dual motor setup that will make it an AWD electric SUV. The Harrier EV is nearly launch-ready and will arrive in 2024.
