

TATA SIERRA EV

The Tata Sierra is making a comeback in the form of an EV. The new Sierra is based on the Gen2 Tata EV platform. Its advantage is that it is not a dedicated EV platform and, as a result, it is safe to assume we will also see the Sierra in an ICE avatar. The new Sierra comes with a sleek front-end design, the large glass panels on the side remain. But what designers have done is cleverly hide the rear doors. Inside, one can choose between a more lounge-like four-seater or a generic five-seater option. We expect a 500km plus range and are yet to get a confirmation if it will feature AWD tech. The ICE versions, though, might come with FWD. The Tata Sierra EV is slated for a 2025 launch.

★ SHOW STOPPERS

MG EMG6

Another interesting exhibit at the MG booth was the eMG6, which uses a 1.5-litre turbo petrol engine coupled with a permanent magnet synchronous motor. The PHEV is tuned to offer 301bhp and 480Nm of torque. A 10-speed DU10-speed EDU intelligent electric drive transmission sends power to the wheels. The eMG6 can accelerate to 100kmph in just six seconds.

HYUNDAI IONIQ 6

While Hyundai launched the Ioniq 5 at the Expo, the company also showcased the Ioniq 6 sedan. The sedan will be offered with a choice of twin battery packs similar to the Ioniq 5. The Ioniq 6 gets a single motor set-up that sends power to the rear wheels. However, more powerful dual-motor AWD versions are also on the cards. With 320bhp and 605Nm of torque, these versions will surely be a hoot to drive. As far as the range is concerned, the Ioniq 6 has a claimed WLTP range of 429km. The 77.4kWh variants are expected to return a range of 614km while the range-topping AWD versions offer 583km.
