TATA CURVV

Tata sprung a surprise with the Curvv, which is essentially showcased as an EV. The Curvv is based on the Tata Motors X1 platform—the same one that underpins the Tata Nexon. While the platform of the Curvv is the same as that of the Nexon, it is not exactly identical. The Curvv features a longer wheelbase. Powering the ICE version of the Curvv is expected to be the 1.2-litre TGDI engine and will develop around 125bhp. The crossover is expected to be launched as early as 2024. As far as the design goes, the Curvv on display looked ravishing thanks to the sleek DRLs and sloping roofline. The wheel size has also been reduced to a more doable 18 inches.

MG 4

The born-electric MG4 hatchback was showcased at the expo. First revealed in 2022, this hatch is offered with two battery packs—51kWh and a larger 64kWh. While the 51kWh version produces 170bhp, the latter offers 203bhp. Both variants come with a single-motor, rear-wheel drive layout, and torque output is rated at 250Nm. While the MG 4 is as big as the company's other electric SUV, the MG ZS EV, the hatch offers a sleeker design and comes complete with smart and sleek LED lights up front. Inside, there are twin floating screens for the infotainment and instrument cluster. Space, too, is found aplenty, thanks to the car's large dimensions.
