to switch the IRA (Individual Retirement Account) and 401K with PF (provident fund) and NPS (National Pension System) in India, the advice given by Adams would apply to every Indian income taxpayer.

Yet, knowingly or unknowingly we all complicate our financial lives with many bank accounts and linked debit cards, take on numerous insurance policies without analysing how they work or put money into investments which may be too risky for us and so on. One of the reasons for complicating financial lives is the lack of understanding and seeking excitement with our finances. Smart money moves take time and patience and is boring, because it is so focused, sticking to a plan and being consistent. Moreover, it is all about working on future financial needs, while you give up on some things that you may wish for at this instant.

Remember, implementing your financial plan is not the end; it's just the beginning. Make ongoing adjustments to your financial plans and journey because life is dynamic and full of surprises to scuttle even the best-laid plans. You need to assess your investments, change in tax rules and your own targets to stay relevant. For instance, if you are going through a financially challenging period, you might need to renegotiate loan terms or consolidate debts to manage your liabilities better. These adjustments ensure that your financial plan remains aligned with your evolving life circumstances.

Lastly, think of financial planning as a long-distance train journey—you know the start and you know the end; the in-between can pose challenges you haven't planned. Be prepared to face the challenges by being informed. With financial systems drastically shifting, you can keep evolving with time to get the best out of your money. ■
