

"In my view, it won't take 8 to 10 years for India to reach double-digit growth, but maybe 5 to 6 years"

SUNIL BADALA
Partner and National Head, BFSI Tax, KPMG

We need to run a growth marathon, not a sprint. If you can sustain it at 7-8 per cent, we're sorted. Taking it beyond that is desirable, but would require faster productivity-enhancing reforms.

- **KUMAR:** For India, 7-8 per cent would be sustainable growth, and I think to reach there, you need a savings rate of 36-38 per cent.

- **HIRANANDANI:** Take the case of Mumbai. In the past five years, we are doing 300 kilometres of Metro, the trans harbour bridge that will open up new land equivalent to half the land of Mumbai, a coastal road and the Navi Mumbai airport. We are investing Rs 3 lakh crore in five years, compared to Rs 30,000 crore from central and state governments in 65 years. So, all you got to do is replicate what you've done in terms of investment in this region. India's per capita income is lower than Bangladesh's. So, 7 per cent is not okay; we want 10 per cent and we can do it.
