

INTRUSION DETECTION SYSTEM, RAILWAYS
Assam and North Bengal

A JUMBO EFFORT

An ingenious technical modification to existing infrastructure helps the **Indian Railways cut down elephant deaths due to train collisions**

By AVISHEK G. DASTIDAR

No man or beast can ever dare to come in the way of an elephant herd when it goes foraging along its chosen route, or corridor, of migration. Except the mechanical beast called the locomotive, which, bound by fixed tracks, cannot play by those rules. In India's Northeast, home to more than 10,000 elephants, this often leads to an inevitable, and tragic, conclusion. Over 200 elephants have died after getting hit by trains in the northeastern states in the past 10 years. It is a crying shame, and something that needed an urgent fix. The Indian Railways
