

Advancing the Energy Transition for India's Net Zero Journey

Hitachi Energy India stands at the forefront of the nation's energy transition. Its contributions are advancing a sustainable and secure energy future while fortifying power infrastructure and enabling green mobility.

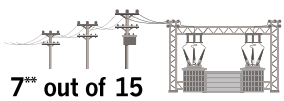

India, the world's third largest[1] power producer and consumer, stands at a pivotal moment in its energy journey. As the nation strides forward into a new era of development, its energy demands are surging, driven by an accelerating economy and the aspirations of its people. Meeting these growing energy requirements necessitates not just innovation, but a strategic overhaul of our energy systems. The challenge and opportunity lie in envisioning a resilient and flexible energy infrastructure that is agile, capable of addressing complexities and capacity while significantly reducing carbon emissions.

A global technology leader committed to advancing a sustainable energy future for all, Hitachi Energy is driving India's energy transition with its diversified portfolio of Digital, Green, and Innovative solutions which ensure that reliable power becomes the lifeline of national progress and sustainable development.

Hitachi Energy's Footprint in India*

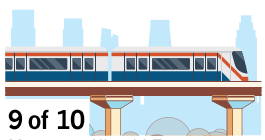

~33GW
of renewables connected through Hitachi Energy technology

7 out of 15**
High Voltage Direct Current (HVDC) links in India powered by Hitachi Energy technology

1 out of 3
Locomotives powered by Hitachi Energy technology

9 of 10
Metro use Hitachi Energy power and SCADA system solutions

Empowering a Green Energy Revolution

India's vision for green energy is ambitious and forward-thinking, as it places clean energy at the core of its varied energy solutions to achieve 500 GW of non-fossil energy capacity by 2030, 50% cumulative electric power from renewables by 2030, and net zero emissions by 2070.2 The Central Electricity Authority's planned investment of ₹2.44 trillion3 in renewable grid integration highlights the commitment to fostering a carbon-neutral future.

In this evolving landscape, Hitachi Energy is a pioneering technology leader which is co-creating best-in-class solutions that deliver on the promise of a sustainable energy future for today's generation and those to come. This is being driven by a portfolio of path-breaking products such as HVDC transmission corridors, innovative transformers, power quality products, and grid automation solutions that effectively enable clean energy transition. Hitachi Energy is powering landmark projects such as the upcoming 4.75 GW renewable energy park in Gujarat, which will be part of India's largest solar park when completed. Collaborating with the National Thermal Power Corporation Renewable Energy Limited (NTPC REL), Hitachi Energy is supplying its high-performance made-in-India power transformers - one of the highest rating of transformers used by solar power evacuation - to enhance grid reliability and stability.

From powering the Pakal Dul Power Project, one of the biggest hydroelectric projects in Jammu & Kashmir, to extending grid connection solution for a solar PV plant in Rajasthan, Hitachi Energy is tapping into India's vast clean energy potential, and catalyzing India's journey towards net zero.

> *"Backed by our proven expertise in Digital Technologies, Green Technologies, Innovative capabilities, and a global legacy of transforming energy landscapes, Hitachi India is pioneering the evolution of scalable, flexible, and secure energy systems of the future that addresses the urgent need for decarbonisation while ensuring the supply of reliable and sustainable energy to every corner of the nation."*
