Gujarat Leads the Way in Semiconductor Policy, Driving Innovation Forward

Hon'ble PM Launched the Semiconductor Mission: Budgetary outlay worth

₹76,000 crores

Semiconductors and displays are foundational technologies for modern electronics. From smartphones to satellites, electric vehicles to AI-driven systems, and critical infrastructure to defense systems, semiconductors drive the ongoing digital revolution. In 2020, the Indian semiconductor market was valued at $15 billion and is projected to grow over 400% to reach $63 billion by 2026.

Recognizing the sector's role in achieving Viksit Bharat@2047, the Union Government, led by Hon'ble Prime Minister Shri Narendra Modi, approved the India Semiconductor Mission. With an ambitious ₹76,000 crore budget, this programme aims to foster self-sufficiency and advance India's semiconductor and display fabrication ecosystem in India.

400% growth is expected in the semiconductor market, reaching **$63 billion** by 2026

An Additional **40%** assistance from the Union Government
