
RED FLAGS FOR INDIA
The areas of concern open to cyber attacks and possible weaponisation
TELECOM NETWORKS
India's communications networks depend largely on Chinese and foreign hardware and software, making them vulnerable to cyber attacks
CCTVs
With over 90 per cent of government installations having Chinese devices, there is a clear and present danger of surveillance, data theft and sabotage through malware
CIMs
Cellular IoT Modules use cellular networks to enable connections between devices and amongst critical installations. Firmware updates can plant malwares/ activate embedded explosives
AVIATION
Fly-by-wire flight control systems and in-flight Wi-Fi can be compromised by malware and can trigger failure/ explosions
