getting left behind in the AI race, it is important to draw a distinction between the use of AI and its indigenous development. Over the past two decades since the advent of the internet in India and the widespread adoption of digital technologies, a familiar pattern has emerged where the use of emerging new technologies by both citizens and businesses has been way ahead of both the indigenous development of these technologies and the regulations around them. A similar phenomenon is at play in AI with adoption of its tools and models being way ahead of regulatory measures. A paradox has thus emerged where Indians are not left behind in their use of AI but India itself lags in the AI race with increasing use of models

A DISTINCTION MUST BE DRAWN BETWEEN THE USE OF AI AND ITS INDIGENOUS DEVELOPMENT. **WE'RE WAY AHEAD ON THE FIRST,** LAGGING IN THE LATTER
