SUPERMOM REVOLUTIONISING CHILDREN'S HEALTHCARE HISTORY DIGITALLY

As we celebrate the remarkable achievements of women in India with this particular issue, we are pleased to spotlight a ground breaking innovation that aligns perfectly with the spirit of Nari Shakti.

Imagine a world where parents can seamlessly manage their children's healthcare records at their fingertips, ensuring their little ones grow up healthy and happy. Introducing KidsCur, the ultimate digital healthcare companion for today's mothers, revolutionising how we care for our children. We had the privilege of sitting with the visionary woman behind KidsCur, Ms. Nishita Thakur, as she shared her inspiration for creating this platform and its impact on the lives of millions of mothers across India.

Q Nishita, what motivated you to launch KidsCur, and how does it contribute to the well-being of children in India?

Nishita: As a mother of premature twins and with constant visits to the paediatrician, I experienced the challenges of managing a child's health records. KidsCur was born out of wanting to simplify kids' health records in an organised manner and make them available on tap for busy mothers, providing them with a comprehensive tool to track and manage their children's health effortlessly at their convenience.

Q Tell us about the key features that make KidsCur stand out in kids' healthcare.

Nishita: KidsCur is a game-changer. It allows parents to securely manage, store, and access their digitally available child's medical records and offers a handy vaccine guide to remain aware of their child's immunisation schedule. We've integrated a unique feature that enables parents to locate the best doctors and pharmacies within a 15-kilometer radius. And there are many other special features available on the app. It's about making healthcare accessible and stress-free for moms with smartphones.

Q In a nation where women are leading in various domains, how does KidsCur contribute to the empowerment of mothers?

Nishita: Due to busy lifestyles, urban parents find tracking their children's vaccine schedules challenging. This can result in missed vaccinations or delays getting the necessary shots for their kids. With KidsCur, we enable parents to take charge of their family's well-being, ensuring they make efficient and well-informed decisions for their children.

Q As part of "100 Women Who Are Transforming India," how do you see the role of women evolving in shaping the future of our nation?

Nishita: Whether in technology, healthcare, or any other field, women across the globe are breaking barriers today and driving positive change. KidsCur is just one example of how women can save their precious time and use the same to contribute to a better, healthier future for our children.

At a time when Indian mothers are now coming forward to create transformative change across verticals, KidsCur stands as a testament to the innovative spirit of Indian new-age mothers. By simplifying kids' healthcare record-keeping, Nishita Thakur and KidsCur have ensured that mothers use an effective and efficient way to digitally manage their child's healthcare history for the next generation.
