

empathetic attitude towards children in general. To foster and support their professional growth, we prioritize their academic enrichment through 540 hours of special training classes per year. When needed, such classes are also conducted by esteemed institutions like IISC- Bangalore, which are exactly tailored to the needs of our faculty. This commitment of ours to development is evident in the fact that many of our faculty members have authored their own textbooks. In our pursuit to realise an inclusive and positive workplace, we extend an all round and comprehensive support to our employees. This includes providing insurance coverage for every staff- member, conducting regular health check-ups, offering nutritive meals, and taking care of their children's education. By addressing such holistic well-being of our workforce, we aim at creating an environment that not only encourages the professional growth but also takes care of the overall health and happiness of our valued team members. We ultimately believe that a child at his impressionable age does not feel happy and enthusiastic unless he sees the teacher before him, happy and radiating positivity.

Q What are the few initiatives you are particularly proud of?

At our institution, we've initiated a new practice called "student conclave" to empower our students. Here, students actively take part in discharging the various responsibilities entrusted to them by the school such as taking charge of various evehnts and celebrations conducted on our campuses from time to time. These activities are not only budgeted, but meticulously planned and executed by the students themselves.

Managing large-scale events involving crowds exceeding 1000 individuals serves as a practical training ground for the students. This hands-on experience imparts essential leadership skills to the youngsters, teaching them how to shoulder responsibilities, collaborate effectively in groups, stand on their own feet and think for themselves when faced with unforeseen challenges.

In addition to giving such practical experiences, we also conduct happiness classes for them. These sessions aim at encouraging children to introspect and look inward, thus, fostering a contemplative mindset in them. Further, by incorporating TED Talks in our curriculum, we provide a platform for students to express their ideas fearlessly, in that way, promoting their self-confidence and effective communication skills. Through these measures and many more, we strive to empower our students with the skills and mindset necessary to navigate themselves through the challenges of future confidently.

Q What message you would want to give youngsters in education sector?

Education sector is the most dynamic field changing every day. At the same time it has the real capacity to revolutionise the thought process of the entire society. Young leaders inherently have lots of enthusiasm and energy to try to do something new. So they love to create and innovate something on each and every day. And when they do it with right intention and interest, actively involving all the stake holders, it really helps them to come out with flying colours.

There is a lot of potential in technology, particularly the AI, to overcome the challenges of an offline classroom. Instead of considering offline and online education as two different verticals, if one can address the challenges of an offline classroom with technology-driven platforms and make learning and assessment more personalised, we can pave the way for a prosperous future in education.
