hospital care. The government is running Jan Aushadhi Kendras, where we give discounts of up to 80 per cent on the very same medicines, with no compromise on quality. Because of these centres, the poor and the middle class have saved the Rs 30,000 crore they would have spent on medicines.

Take mobile data too. Ten years back, mobile data would cost Rs 250 per GB. Given the amount of GB a common man uses today, his monthly bill at those prices would have been upwards of Rs 4,000-5,000. Now, mobile data rate in India is around Rs 10 per GB. Consequently, there is a saving of around Rs 3,000-4,000 every month on mobile bills, or around Rs 50,000 per year.

A few days ago, we started the PM Surya Ghar Muft Bijli Yojana. **The government is providing assistance of Rs 78,000 to every family to set up solar panels in their homes. We have started an online registry for this scheme and, within a few weeks, more than 10 million people have applied.** Most of the applicants are middle-class families who have an AC, 2-3 fans, maybe a fridge and a washing machine. So, they require about 300 units of electricity. Now, they will get these 300 units free. Besides, the government will buy the excess solar power, providing every family an additional source of income.

It was very easy for me to dole out taxpayers' hard-earned money and earn applause. But our government has demonstrated that it can make people's lives easier by helping them save money. This path may be a bit difficult, but it is for the long term and in the country's interest. I may have to work harder for it, but I have chosen this path because I want to hand your children a prosperous India.

If you want to understand our governance model, you need to look at the changes in the PSU sector. Very few PSUs so far have been useful for the country, most have proved to be a burden. During the previous governments' regime, both BSNL and MTNL were ruined. HAL too. Lies were also spread about LIC. And what is the situation today? **Today, BSNL is moving forward with the power of Made in India 5G. Today, Air India is expanding in its new role. Record manufacturing is happening in HAL, generating record revenue. HAL now has Asia's largest helicopter-making factory. Today, LIC is also becoming stronger by the day.**

Because of our government's effective governance, most PSUs are today posting record returns and investor confidence in them is also rising significantly. Ten years ago, the net profit of these PSUs was around Rs 1.25 lakh crore. Now, it has doubled to around Rs 2.5 lakh crore. In 10 years, the net worth of PSUs has risen from Rs 9.5 lakh crore to Rs 70 lakh crore. When you put the nation first, these are the outcomes you get. Put family first, and you can see what the consequences have been.

If my mission till 2047 is accomplished, there will be no government in the common man's life. He will have the freedom to live his own life, have the whole sky to give wings to his dreams

Another big aspect of our governance has been zero tolerance for corruption. Every agency is completely independent to act against corruption. **Look at ED. Till 2014, 1,800 cases had been registered under PMLA [Prevention of Money-laundering Act]. In the past 10 years, 4,700 cases have been registered. Till 2014, assets worth only Rs 5,000 crore were attached. In the past 10 years, assets worth more than Rs 1 lakh crore have been attached.** The ED has arrested a large number of criminals associated with terror financing, cyber crimes and narcotics. Properties worth thousands of crores have been attached. The ED's action against several bureaucrats and recovery of cash has caught the nation's attention. When such swift action is taken, naturally, it upsets some people. That is why they are running a campaign abusing Modi day and night. The country is also watching. Their policy, intention and commitment is under a cloud. To them, the nation is clearly saying, "So sorry".

It is election time. So our friends in the Opposition are busy crafting dreams on paper. But Modi looks past dreams and proceeds with firm resolution. I can say with confidence that the coming five years will make India the third largest economic power. The coming five years will guarantee a stable, capable and strong India in an uncertain world. The coming five years will take India's infrastructure to new heights. The coming five years will be the years of transformation for Indian Railways. The coming five years will be years of expansion for bullet trains and Vande Bharat trains. The coming five years will be the years of unprecedented use of waterways.

In the coming five years, you will see India's defence exports set a new record. In the coming five years, you will see India's space sector take flight. You will see the success of Gaganyaan. In the coming five years, you will see the rise of new sectors for the country's youth. In the coming five years, you will see solar power reaching every home. In the coming five years, you will see record growth in EV manufacturing in India. In the coming five years, you will see the impact of the semiconductor and hydrogen missions on the ground. And in the coming five years, you will see decisive policies and decisions being taken as well.

To fulfil this and more, I started my work long ago. It is a progressive unfoldment, so I won't talk about it now. I'll come back to the India Today Conclave and discuss these at length. ■
