It was January 19, 1984, when Hero began its journey in the Indian automotive space. Fast-forward 40 years, and Hero MotoCorp is one of the recognisable two-wheeler brands in the world. The home-grown automaker has a presence in more than 47 countries, more than 115 million customers and, 9,000 plus customer touchpoints across the globe. This is further accentuated by Hero's dedication towards promoting technology through its two world-class centres, more than 1,000 engineers and technology experts and 750 plus patents. All this combined makes Hero MotoCorp the world's largest manufacturer of scooters and motorcycles.

After conquering the world of budget two-wheeler, Hero MotoCorp forayed into the world of the premium motorcycle market with nothing short of a winner. Hero's Mavrick already has all the necessary pedigree to make it stand out from the competition. At its launch at Hero World 2024, the brand's annual event, the Mavrick made a lasting impact on customers and enthusiasts alike, not only in India but international markets. The Mavrick made its arrival in the Indian market in three variants, priced from Rs 1.99 lakh to Rs 2.24 lakh (ex-showroom). An incredibly reasonable price for a bike that has the latest from the world of motorcycle technology.

Hero promises a mix of performance, style, and cutting edge technology with its latest offering in the middleweight motorcycle segment. It comes packed with a 440cc, single-cylinder engine, which is air and oil-cooled, churning out 27bhp@6,000rpm and 36Nm@4,000rpm. Hero has ensured a smooth experience right from the get go; this is because the engine has been designed with low-end torque in mind, hence 90 percent of the torque is accessible from just 2,000rpm, ensuring a hassle-free experience in the city. This powerful mid-sized motor is mated to a slick-shifting 6-speed gearbox with a slip-and-assist clutch.

The 17-inch wheels, both at the front and rear, combined with the 175mm of ground clearance and trellis frame ensure that the Mavrick sticks to its promise of delivering a truly world-class product. Thanks to its specially-crafted steel radial pattern tyres, the Mavrick sticks to the road, too, even during extreme lean angles. Furthermore, Hero hasn't skimped on keeping the rider comfortable during any given situation. The 43mm telescopic front forks and 7-step preload adjustable twin shocks at the back make for not only a comfortable experience, but, a customisable one, as well. The

320mm disc brake up front and 240mm one at the back, along with the dual-channel ABS, ensure trouble-free stopping experiences on the tarmac.

That's not all, the Mavrick also sports a digital speedometer with a negative display which can be connected to a smartphone with ease. Thus offering useful information like phone battery status, missed call alert, low fuel indicator, distance to empty and a lot more. There's even an eSIM-based connectivity feature which grants access to over 35 functions like remote tracking through the 'Connected 2.0' technology. Since there will be a maverick riding each Mavrick out there, Hero is offering its latest with five colour options across their three variants. These include Arctic White, Celestial Blue, Fearless Red, Phantom Black and Enigma Black. Hero's Mavrick isn't just out to make a place in the premium market, it's out to make a dent like a true maverick.
