ADDRESSING CLIMATE CHALLENGES

Scorching heat in summers, floods, hurricanes and heavy storms in monsoons, bone-chilling cold during winters and sometimes a complete blurring of the seasonal boundaries have become a new norm across the world. The immediate repercussions of climate change are strikingly frightening. With a drastically changing ecosphere, measures imperatively need to be instated to course correct. An article titled "A Race We Can Win" on the United Nations' web page mentions a quote by the UN Secretary-General António Guterres, "The climate emergency is a race we are losing, but it is a race we can win".

This goes to show that even though the world is transforming towards a disparaging finish, it is not too late to mend that track. It is most undeniably not forlorn. There has never been a better time for individuals and communities to come together to incur courageous actions collectively. In the present scenario, the onus of the corrective actions falls heavily on businesses of the world. A company's policy to control the hostile bearings of ecological dilapidation and the consequent climate change that may arise from the daily business operations in the market takes one towards the pursuit of sustainability. Pernod Ricard India has made efforts to carry on this task through their day-to-day routine process. Through several initiatives, the corporation has continued towards the crucial path of sustainability.

PERNOD RICARD'S SUSTAINABILITY IDEALS

Pernod Ricard has four core essentials mapping the workings of the company: Nurturing Terroir, Valuing People, Circular Making, and Responsible Hosting. The very first one of these values, 'Nurturing Terroir', shows a dedication to actions of sustainability and responsibility. The second pillar, 'Valuing People' emphasizes the merits of creating a balanced work environment with a gender-balanced workforce. It aims to close the gender pay gap while striving to cultivate a diverse and inclusive culture in the workplace. The third aspect, 'Circular Making' caters to the need to conserve and include recycling in the production process to reduce the carbon footprint of the company. The last pillar, 'Responsible Hosting', aims for responsible consumption of their brand which includes addressing the harmful use of alcohol, in accordance with the World Health Organization's goal of reducing harmful drinking by 10% worldwide by 2025.

Being Wine and Spirits producers, the company has been mindful of its production and distribution process in the enterprise. Their sustainability pillars cover all aspects of these processes, from grain to glass. They have meticulously created objectives in the context of sustainable business in accordance with the United Nations Sustainable Development Goals. Pernod Ricard India hones the employees' ethics to be driven by a stern focus on goals like diversity and inclusion, awareness and safety of employees and the community at large. The threat of climate change has become a severe motivator to ensure a dedicated force towards its amendment. As enablers of conviviality, the company engages in a creative approach in its marketing, social initiatives as well as the very products it makes. Their vision to create conviviality sets to unlock the magic of human connections. With the amplified problems of environmental burden, concerns are raised around the domino effects the world has to endure. This context provides a fertile ground for not only an inevitable need but also an opportunity to carry forward sustainability goals.

MAINTAINING SUSTAINABLE LANDSCAPES

Pernod Ricard emphasizes on the promotion of sustainable practices through a variety of actions. Expanding through biodiversity covering over 771 Acres with 163 biodiversity plots, the company is devoted to the environmental conservation. Using sustainable, regenerative, water-efficient agri-practices, the corporation has garnered transformation and tackled the issue of climate change ingeniously. They are dedicated to nurturing terroir (the complete natural environment in which a particular product is produced, including factors such as the soil, topography, and climate) and its biodiversity.

A HOLISTIC APPROACH TOWARDS THE DEVELOPMENT OF THE WORKFORCE
