LITHIUM PROSPECTS

The Reasi find brings into focus the soft, silvery metal that is highly sought after these days, especially for its use in sustainable mobility solutions

THE REASI TIMELINE

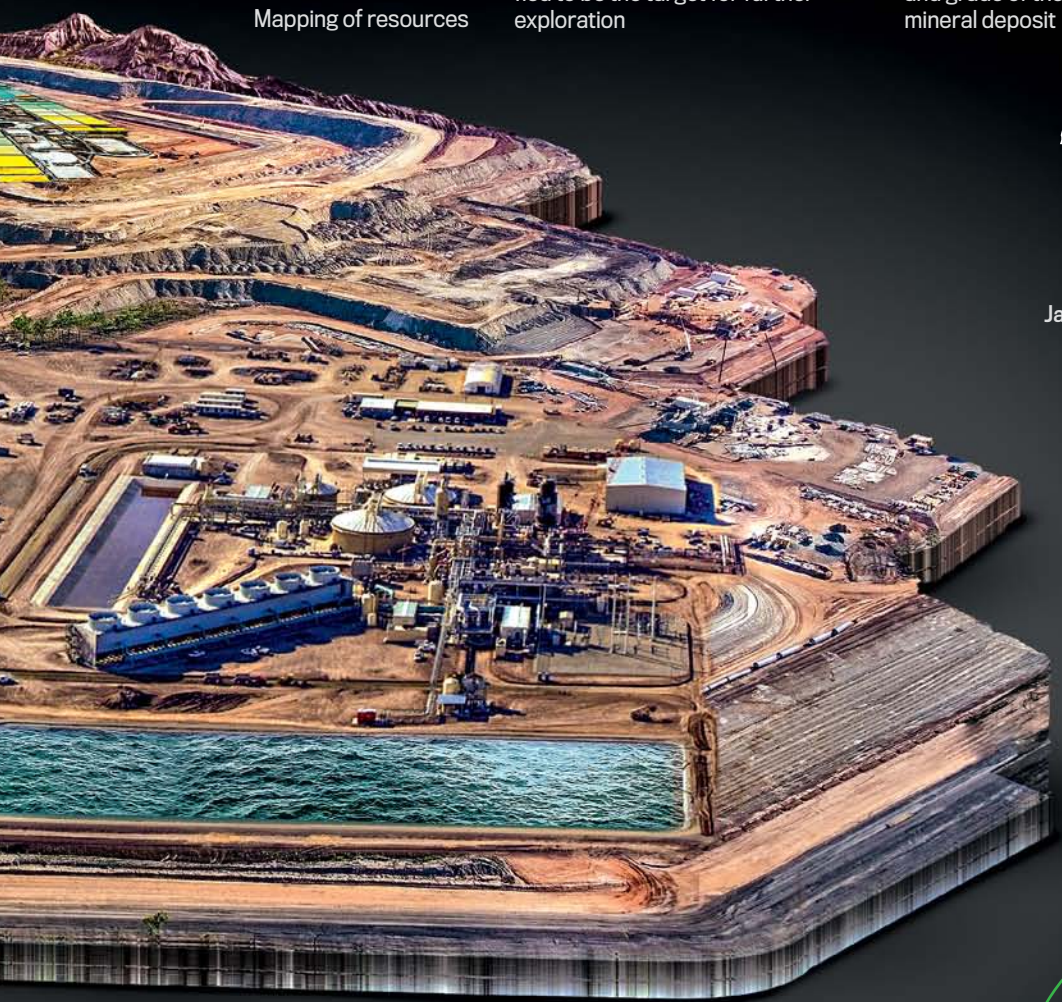

Four stages of exploration

G4 RECONNAISSANCE *1995-96*
Mapping of resources

G3 PROSPECTING *2020-21*
Quantities are inferred, based on the interpretation of geological, geophysical and geochemical results to make preliminary estimates, and a deposit identified to be the target for further exploration

G2 GENERAL EXPLORATION *Next 2-3 years*
More studies are done to estimate the shape, size and grade of the mineral deposit

G1 DETAILED EXPLORATION *3 years thereafter*
Characteristics of the deposit are established with a high degree of accuracy. This will help determine the need for a feasibility study for extraction

5.9 MT
The lithium deposit estimate in Reasi. If verified, India will have the sixth largest reserves in the world

500 PPM*
Grade of lithium in Reasi (*parts per million)
More than 300 ppm is considered a good quality value

INDIA'S IMPORT COST

(2019-2021)

Lithium	Lithium-ion cells
₹522 CRORE	₹26,204 CRORE

₹33,750 CRORE
Worth of investments India needs to achieve the PLI target of setting up 50 GWh of lithium-ion cell and battery manufacturing plants
