

Eco Sensitivity

In this idyllic setting, a harmonious blend of human habitation and natural beauty is evident, where 1/4th of the villa is thoughtfully developed, and the remaining 3/4th of the plot embraces lush green landscapes. The landscape design is a testament to sustainability and conservation, with local species of drought-friendly plants dominating the scenery. These resilient floras not only thrive with minimal water usage but also create a thriving habitat for a diverse array of wildlife, fostering biodiversity in the region. This green oasis is not just visually stunning but also an ecological haven, promoting a deeper connection with the natural world and underlining the vital importance of preserving our fragile ecosystem

This way, the living areas, the kitchen the dining and living became a hub for entertaining, without intruding into the personal spaces of the family. A bedroom within the villa is nestled on one side, granting direct access to the vast garden and lawn, ensuring a private retreat. The primary bedrooms are situated in the next level prioritising personal space and tranquillity.

Biophilic Framework

Within this space, every interior is built upon the biophilia framework, incorporating abundant natural light, ventilation, and the use of natural wood and stone to enhance the seamless connection between the indoors and outdoors. The goal is to create a dwelling that prioritises the wellbeing of its inhabitants, supports the biodiversity of the site, and nurtures the surrounding environment by weaving environmental performance, design, and nature into a unified, real-life experience. This endeavour seeks to establish itself as a benchmark in conscientious architecture, fully attuned to the pressing energy and environmental issues of our time.

Snehal Suthar and Bhadri Suthar are the co-founders and co-principal designers at tHE gRID Architects, an Ahmedabad-based firm that believes in harmonising nature and humanity through inclusive design and sustainability.
