THE OTHER REALITY
Prime Minister Narendra Modi meets Chinese president Xi Jinping on the sidelines of the BRICS Summit in Kazan, Russia, Oct. 23

ANI

the slowest since early last year and below its target of about 5 per cent. The country's real estate and infrastructure sectors are saturated and stagnant. There has been an overcapacity in allied industries like steel, aluminium, ferroalloys and those producing other raw materials for construction. Moreover, although China's manufacturing sector is competitive, it is not necessarily irreplaceable. Studies suggest that the export industry is largely assembly-based. As products become more technology-intensive, the lack of core technology will be a disadvantage. Meanwhile, with a strict single-child policy in place, China is exiting labour-intensive sectors such as apparel and footwear. Instead, it is going for high-value products like automotive, which are then pushed into other markets at cheaper prices. Weak consumer spending has also pulled down its domestic economy.

"China's economy is not doing too well. Therefore, they will use all avenues to dump cheap goods," says Sahai. Also globally, countries led by the US are imposing higher tariffs on China—say, additional duties on electric vehicles into the US and European economies. Those strictures will only aggravate with Donald Trump's return to power. If China loses those markets, it has to fall back on alternative markets. "That may also encourage China to supply or dump more [products] in India," adds Sahai.

"IT IS THE ECONOMIC REALITY WHICH IS PUSHING THE DYNAMICS OF THE RELATIONSHIP BETWEEN [INDIA AND CHINA]"

GUARDING THE GATE

To protect itself, India too has imposed anti-dumping duties and placed other restrictions. Another way it is restricting the flooding of Chinese products into Indian markets is via Quality Control Orders (QCOs)—which ensure that consumers receive only high-quality products. While the Department for Promotion of Industry and Internal Trade (DPIIT) under the ministry of commerce and industry issues QCOs for critical products that impact consumer safety, the Bureau of Indian Standards (BIS) acts as the certification and enforcement authority for the products specified therein. In fact, unless the exporting countries get such products registered with the BIS, they are not allowed to supply them.

When India issues QCOs, they don't just cover any specific country but all imports of the specified product from anywhere in the world. Of late, however, the Modi regime has chosen products that are imported in a big way from China—
