Saliva Based Test
(No Blood Needed)

How does genetics impact health and wellness, and how can this test help?

Genetics plays a crucial role in determining how our bodies respond to exercise and nutrition, medication etc. MyDNA Gene Proactive analyses genetic traits related to chronic conditions, offering insights into cardio health, diabetes, various cancers, mental health, and other 90+ health conditions. Armed with this knowledge, you can adopt personalised preventive measures, tailor your routines, and make informed lifestyle choices, promoting overall wellness and a healthier future for yourself and your family.

Can this test help me prevent hereditary health conditions?

Absolutely. By identifying genetic predispositions early on, MyDNA Gene Proactive empowers you to take proactive steps in preventing hereditary health conditions. With personalised action plans based on your unique genetic makeup, you can mitigate risks and enhance your overall well-being.

Is MyDNA Gene Proactive suitable for all age and gender groups?

Absolutely. MyDNA Gene Proactive is designed for individuals of all ages and genders. Whether you're a young adult planning a family health journey including parents and children or someone in their golden years focusing on preventive health, this test provides valuable insights tailored to your specific genetic predispositions.

How can MyDNA Gene Proactive contribute to a healthier future?

By offering a proactive approach to health management, MyDNA Gene Proactive enables individuals to understand their genetic risks, allowing for early intervention and preventive measures. This not only promotes a healthier future but also empowers individuals to make informed choices for themselves and their families.

How can I decode my genetic report and make lifestyle changes with MyDNA Gene Proactive?

MyDNA provides a complementary genetic counselling session with each test. Our expert genetic counsellors guide individuals through their reports, explaining the findings in detail. Based on the genetic report, current lifestyle, and family history, a personalised action plan is crafted. This secondary report acts as a roadmap, helping individuals make informed choices and embrace a healthier lifestyle.
