Shaping India's Destiny

Aatmanirbhar Bharat and the Quest for Viksit Bharat

In the last decade, the Government of India has undertaken a series of initiatives aimed at promoting self-reliance and driving economic growth across various sectors. Through a multifaceted approach encompassing digital transformation, infrastructure development, job creation, and social welfare schemes, India's pursuit of self-reliance has taken center stage under the visionary leadership of Sh. Narendra Modi, Hon'ble Prime Minister, wherein India achieved remarkable economic success in the past decade, with the nation's digital and physical infrastructure reaching new heights. India's dominance across sectors has garnered widespread recognition on the global stage, with the country being hailed as an unprecedented economic success story.

The government's policies have instilled confidence among investors, leading to a surge in positive sentiment towards India's potential and success. Anchored on the principle of Aatmanirbhar Bharat (self-reliant India), the government has spearheaded transformative initiatives across various sectors, propelling the nation towards economic prosperity, social empowerment, and environmental sustainability. Central to this paradigm shift is the Production Linked Incentive (PLI) scheme, alongside a slew of infrastructural advancements and welfare programs aimed at fostering indigenous innovation, enhancing competitiveness, and bolstering resilience against external shocks. The Modi government has demonstrated a steadfast commitment to financial management and policy-making based on stability, consistency, and continuity. The recent Union Budget received praise for its adherence to these principles, with a focus on record productive expenditure, investment in welfare schemes, control on wasteful expenditure, and financial discipline. By completing projects in a time-bound manner, the government has ensured optimal utilization of resources.

Digital Revolution: Empowering Every Citizen

One of the cornerstones of Bharat's journey towards self-reliance has been its digital revolution. The Unified Payments Interface (UPI), a flagship initiative, has emerged as a game-changer in enabling digital transactions across the country. With a record-breaking 100 billion transactions facilitated last year alone, amounting to over Rs 2 lakh crore, UPI has revolutionized the way transactions are conducted, even in the remotest villages. The Digital Public Infrastructure, coupled with the JAM trinity (bank account, Aadhaar, and mobile phones), has ensured last-mile delivery of government benefits, with over Rs 34 lakh crore directly deposited into the bank accounts of beneficiaries. This has not only enhanced transparency and reduced corruption but has also fostered inclusivity and bolstered public confidence in the government. During the challenging times of the Covid-19 pandemic, Bharat executed the world's largest vaccination campaign through the CoWin platform, showcasing the transformative power of technology in addressing public health crises. Furthermore, the government's emphasis on leveraging technology to streamline recruitment processes has led to greater efficiency and transparency, ensuring equal opportunities for the youth.

Infrastructure Development: A Key Pillar of Aatmanirbhar Bharat

The Modi government's ambitious infrastructure agenda has laid the foundation for a self-reliant India. From doubling the electrification of railway lines to expanding the network of four-lane National Highways, the nation has witnessed unprecedented progress in enhancing connectivity and mobility. In the past decade, Bharat has witnessed unprecedented progress in infrastructure development, driven by ambitious initiatives such as Bharatmala, Sagarmala, PM Gati Shakti, Aviation (UDAAN), Smart Cities Mission, etc. These initiatives have not only bolstered connectivity and efficiency but have also laid the groundwork for sustainable growth across various sectors of the economy. The Bharatmala and Sagarmala projects are flagship initiatives aimed at enhancing road and port connectivity, respectively. The Smart Cities Mission is an ambitious program aimed at transforming urban areas into sustainable and livable spaces through the adoption of technology and innovation.

The allocation of 11 lakh crore rupees in the recent budget underscores the government's commitment to bolstering
