ENGINEERS INDIA LIMITED'S "MAKE IN INDIA INITIATIVES" ARE SHAPING THE VISION OF SELF -RELIANT AND "VIKSIT BHARAT"@2047

VARTIKA SHUKLA
Chairman & Managing Director
Engineers India Limited

The "Make In India" initiative launched by the Government of India, stands as a visionary endeavour aimed at enhancing manufacturing, enticing foreign direct investment (FDI), and nurturing innovation.

Prime Minister Narendra Modi introduced the 'Make In India' campaign as a flagship project to position India as a premier global manufacturing hub. The campaign seeks to revolutionize the nation into a self-sufficient economic force by capitalizing on its strengths across various sectors.

The core aim of the government's 'Make In India' initiative is to foster manufacturing in India, urging foreign manufacturers to set up manufacturing facilities in India and to collaborate technologically with local Indian parties to fabricate in India. The emphasis lies on reducing imports, attracting foreign manufacturers to invest in India, and promoting collaborations. Engineers India Limited (EIL), a premium engineering consultancy company under the aegis of MoP&NG, has been pivotal in advancing the engineering sector in India since its establishment in 1965. Over the last six decades of operation, various strategies have been implemented by EIL to enhance the capabilities and capacities of local manufacturers in the country.

EIL is at the forefront of driving and advancing government initiatives towards a self-reliant India. It is instrumental not only in developing indigenous technologies but also in fostering the manufacture of critical equipment through technical support and handholding to encourage manufacturing within India. Many of the suppliers developed by EIL cater not only to the needs of the Indian market but also supply critical engineering equipment worldwide, furthering the vision of making India a global manufacturing hub in line with the ethos of 'Local to Global.'

EIL actively collaborates with and offers technical and procedural assistance for the advancement of Indian manufacturing industries, particularly Micro and Small Enterprises (MSEs), through its nine Regional Procurement Offices. EIL regularly organizes industry-specific exclusive supplier and contractor meetings to promote awareness among Indian manufacturers.

At the core of EIL's business operations are government policies that prioritize incentivizing local content. EIL adheres to these policies by encouraging the use of local materials, prompting many bidders to take advantage of purchase preference policies for MSEs, Purchase Preference under Make In India, the Domestic Manufactured Iron and Steel Policy (DMI-SP), domestically manufactured electronic and telecom products, and the Start-Up India Policy. In line with the Make In India campaign, EIL encourages Indian subsidiaries of foreign companies to build capabilities and contribute to the country's growth story by participating in projects aimed at developing credentials within the policy framework. Additionally, in sectors with limited competition, manufacturers are supported by EIL to develop prototypes, enhancing their capabilities. This assistance enables suppliers to successfully demonstrate and test prototypes that meet technical specifications, thereby fostering the development of a vendor base within India.

EIL has also contributed to the development of the Central Portal for Oil and Gas Public Sector Undertakings (OPSUs) called the Lakshya Bharat Portal. The portal provides details of goods and services procured, along with demand quantities and empanelment requirements. This portal serves as an interactive platform for feedback, information exchange, and collaboration among prospective investors. This initiative aims to encourage manufacturers to strategically plan investments in new units and product lines.

During the last two editions of India Energy Week (IEW), EIL showcased the Make- In -India Pavilion in collaboration with various suppliers possessing indigenous manufacturing facilities within the hydrocarbon industry. This initiative aligns with the Government of India's theme of AtmaNirbhar Bharat (self-reliant India). EIL is acknowledged as the ambassador for championing the Make In India initiative and propagating the spirit of Self-Reliant India.

The impact of EIL's endeavours on self-reliance is readily apparent in refinery projects, where the indigenous component, once at 10-15% in the late seventies/early eighties, has surged to an impressive 90-95% today. Likewise, in the petrochemical and gas processing sector, the indigenous component has increased to approximately 65%-70%. EIL has over 2400 registered suppliers across various item categories, underscoring its commitment to fostering indigenous capabilities.

> EIL is making significant contributions to the creation of a strong and self-reliant India, paving the way for progress towards the vision of a 'Viksit Bharat' @ 2047.
