CMR GREEN: LEADING METAL RECYCLING FOR A BETTER TOMORROW

Mohan Agarwal
Managing Director
CMR Green Technologies Ltd

> Over the years, we are proud to have built an effective governance framework that promotes ethical conduct, sound decision-making, and sustainable growth.

CMR Group is **India's largest producer of recycled Aluminum** and other non-ferrous metals and is also amongst the **largest in the world** with an **annual capacity of 3,10,000 MT**. Further **1,00,000 MT** capacity is being added in 2024. CMR has maintained its fast-paced growth by leveraging latest technology and continuous improvement. The company has been **growing at 25% CAGR** since our inception in 2006. For the past 18 years, **CMR Group** has been a significant contributor to the **metal recycling sector**. The company takes pride to serve and supply to most of the auto industry in India enjoys, either **sole or a major supplier**.

CMR, a leading manufacturer in India and globally, consistently expands its manufacturing capabilities through strategic growth and continuous improvement, leveraging cutting-edge technology.

The company produces high-quality alloys using 100% post-consumer scrap, focusing on quality, safety, R&D, environment, and wellbeing. It's processes and products have certifications like ISO 14001, TS16949, ISO 45001, and OHSAS 18001. CMR's commitment to excellence has been recognized through its certification as a **"Great Place to Work"**. CMR has released its Sustainability Report, aligning with GRI Universal Standards 2021, detailing its journey towards sustainability, highlighting key metrics, strategic approaches, and transformative initiatives for a sustainable business and world.

Some of the Key highlights of CMR's Sustainability Report:

"Every ton of aluminium production generates 14 MT CO2 emissions and 8 MT of hazardous/ non-hazardous landfill waste, while recycling same amount of aluminium produces 360 kg of CO2 emissions and almost negligible landfill."

CMR prioritizes sustainability as a survival goal, assessing their actions based on creativity, flexibility, consumer value propositions, and positive impact on communities. They aim to ensure effective resource use, enable consumers, and contribute to a healthy planet.

CMR's business aims to improve resource efficiency and product value by implementing Closed-Loop Systems, which reduce waste through recycling. **This leads to the concept of 'Circularity'**.

CMR's goal, according to Sri. Mohan Agarwal (MD, CMR Green Technologies Ltd.), is to spread sustainable practices and encourage others to join us in constructing a more accountable and resilient world. We make use of our connections, resources, and experience to lessen our environmental effect while also working with stakeholders to exchange best practices, information, and creative solutions. Making the most of the numerous environmental benefits that are inherent to our company, we have carefully thought out actions to improve our performance in important environmental areas including emissions, the production of solid waste, the generation of hazardous waste, and greenhouse gas (GHG) emissions. Our efforts are focused on reducing our total environmental and natural resource impact.

At CMR, sustainability is complex and encompasses a number of vital elements that demonstrate our steadfast dedication to ethical and ecologically beneficial behavior. Our strategy is centered on demonstrating the economic viability of our recycling programs while emphasizing environmental stewardship as a means of minimizing negative effects, cutting waste, and protecting vital natural resources. To ensure that our methods are both successful and efficient, we are unwavering in our adoption and application of recycling technologies and methodologies that are in line with strict technical and scientific requirements. Our dedication to this comprehensive sustainability plan is intended to support CMR Green Technologies Ltd.'s economic growth while simultaneously fostering a noteworthy and enduringly beneficial influence on the environment and the larger community.

Every individual in the organization are devoted to sustainability. The company-wide sustainability strategy is integrated into everyday operations by cascading down to unit-specific sustainability actions.

We identified essential ESGs **(Environmental, Social, and Governance)** issues aligned with UN SDGs, all connected to our business operations and strategic focus. This has inherently woven into our products, **promoting a circular economy.**
